The MTBF Report of G238HCJ-L01 Sample

Model ：	G238HCJ-L01	Reporter：	Hsiao Yi Fang	Date：	2019/11/29	Test Region：	RA Lab	Ambient Condition：	25℃

I. Test Condition：

Ta = 50℃，Test time = 1,000hrs，Sample Quantity = 6cs

Ta = 50℃，Test time = 240hrs，Sample Quantity = 6pcs

Ta = 50℃, Humidity =80% RH，Test time = 1,000hrs，Sample Quantity = 3pcs

Ta = 50℃, Humidity =80% RH，Test time = 500hrs，Sample Quantity = 3pcs

II. Judgment Rule：

$\hat{MTBF}_L$ > **30,000 hours @ 90% Confidence Level (Exclude LED)**

III. Judgment Criteria：

Function OK.

IV. Calculating method：

$$\hat{MTBF}_L = \frac{2*\Sigma\,(n * AF * t)}{\chi^2((2r+2), 90\%CL)}$$

- n：Quantity of test samples
- AF：Acceleration Factor
- t：Test Hours
- χ^2：Chi-square function
- r：Failed Quantity

INX Confidential

V. Test Result:

1. After RA test, the function of all samples is OK.
2. So, r= 0, χ^2 (2r+2)= 4.61 @ 90% confidence level.
3. RT = 25℃ and Test temperature = 50℃ So, AF = 5.73;
4. $\hat{MTBF}$ = 2*{6*5.73*1,000+6*5.73*500+3*5.73*1,000+3*5.73*500} / 4.61= 33,559 > 30,000 hrs

VI. Conclusion:

The $\hat{MTBF}_L$ of G238HCJ-L01 > 30,000 Hours. **(Exclude LED)**
